

EXPERTISE FOR THE NETWORKS OF TOMORROW

Your service provider for
telecommunications networks

TKI – The telecommunications networks provider

Telecommunications networks are the arteries of our networked world. Be it the data networks within a company, the vital motorway emergency call networks, or the ultra-modern giga-networks for data transfer – high-performance networks are the basis of every form of wired telecommunication.

As a medium-sized company in the telecommunications industry with more than 100 employees and over 25 years' experience, we are a renowned service provider in the German and international broadband market. Fiber optic communications networks are planned and implemented worldwide using our highly innovative software.

Our core business areas also include analysis, consultancy, planning, tendering, construction, and documentation of telecommunication networks. Our customers are planning companies and network operators that operate internationally.

Services related to broadband expansion

Consultancy

Our consultancy team supports districts, municipalities, housing association companies, municipal utility companies, and energy suppliers with needs and availability analyses, feasibility studies, or master plans, while also supervising award procedures and funding programs.

Planning

TKI helps regional and nationwide carriers, network operators, and municipal utility companies visualize and implement network construction projects. We take care of all planning aspects, from the concept phase through to documentation.

Construction and operations

We build new telecommunications, fiber optic, and broadband networks both according to specifications and according to our own concept design. For civil engineering projects, we work together with our reliable partners and assume responsibility for site management and supervision.

Software

NET by TKI offers all industry experts a high-performance software solution for telecommunication networks. Automated and optimized functions help you save time and costs when planning, documenting, and managing your FTTx network.

Designing tomorrow's networks with us

Technical expertise

Experienced planning engineers, project managers, and site managers work hand in hand with trained measurement technicians who use state-of-the-art equipment.

Customer focus

Focusing on our customers' needs is our utmost priority. This includes consistently implementing technical requirements as well as handling the sensitive business of end-customer relationship accordingly.

Engineering

We offer and implement all work stages according to the standards of the Official Scale of Fees for Services by Architects and Engineers (HOAI). Our commitment to quality is defined by the use of up-to-the-minute and self-developed software modules.
