

DESIGN WITH US THE NETWORKS OF TOMORROW

Telecommunications networks are the arteries of our networked world. High-performance fiber-optic networks are the basis of all networked communications.

Gigabit & digitization strategies

End-to-end software platform

Technical-economic concepts

Innovative solution for the digital construction site

Effective planning of TC networks

Services for around the fibre optic expansion

180
Employees

35
Years of experience

Services for Broadband Expansion

Consulting

Our consulting team supports **districts**, municipalities, housing companies, municipal utilities and energy suppliers with **demand and availability analyses**, feasibility studies or master plans and accompanies award procedures and funding programmes.

Design

TKI works for regional and national carriers, network operators and municipal utilities in the visualisation and **implementation of network construction projects**. We take care of all aspects of planning, from conceptualisation to documentation.

Construction & Operation

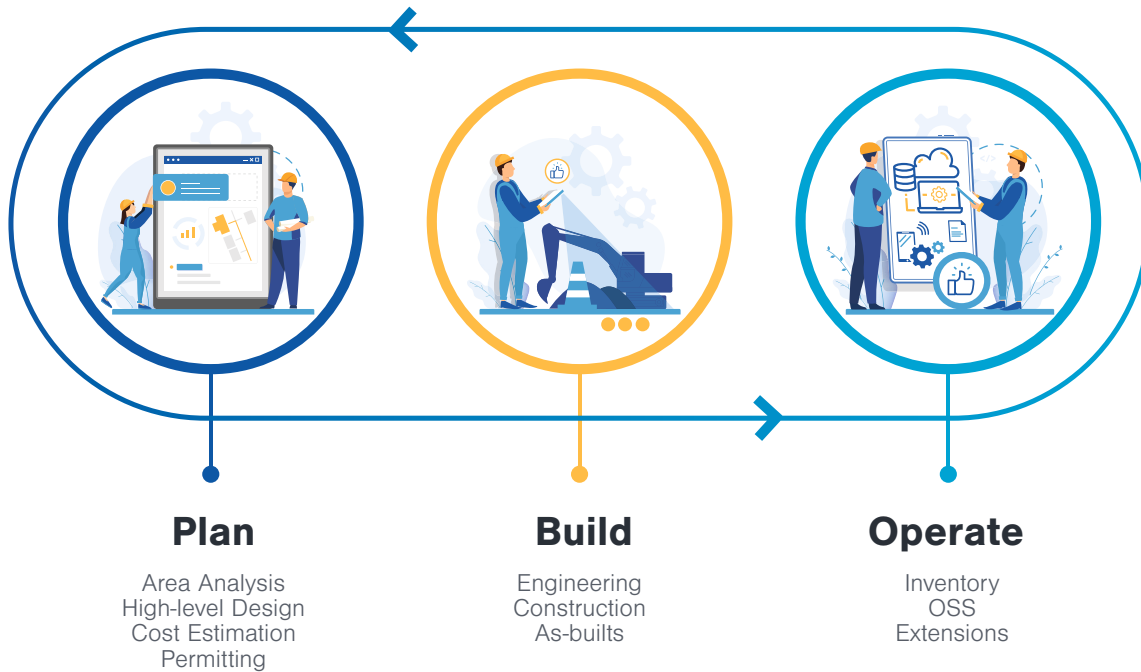

We construct new telecommunications, fibre optic and broadband networks both according to specifications and our own conceptual planning. In civil engineering, we work together with our reliable partners and assume responsibility for **construction management and supervision**.

Software

With NET, TKI offers all industry experts a **powerful software solution** for telecommunication networks. With the help of automated and optimised functions, you can plan, document and manage your FTTx network in a **cost- and time-saving** manner.

SOFTWARE SOLUTION FOR THE NETWORKS OF THE FUTURE

NET is TKI's powerful software platform for the highly automated planning, documentation and management of broadband-capable fibre optic networks.

Ende-zu-Ende Softwareplattform

NET Design

Comprehensive software package for highly automated planning

NET Engineering

Powerful module for detailed planning and documentation

NET Operations

Intuitive solution for efficient network management

NET Cloud

Multifunctional module for mobile access to your data

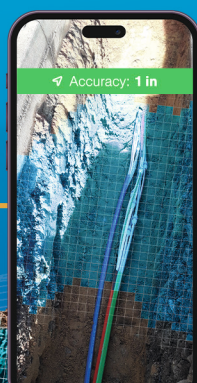

NET Build

Innovative solution for fully digital mapping of the construction phase

POWERED BY
vitruvi

PGP PostgreSQL Provider

Flexible connector for your Autodesk specialised shells

NET Scan

Precision meets Efficiency
3D scanning for better construction quality and seamless documentation
